EDUCATION

Bachelor's of Engineering: Computer Science - Co-op

Hamilton, Ontario

McMaster University (cGPA: 3.9/4.0)

Sept 2024 – Jun 2028 (expected)

- **Relevant Courses:** COMPSCI 2C03 - Data Structures and Algorithms, COMPSCI 2ME3 - Introduction to Software Development, COMPSCI 2GA3 - Computer Architecture, COMPSCI 2DB3 - Databases, COMPSCI 2SD3 - Concurrent Systems, COMPSCI 2XC3 - Algorithms and Software Design, COMPSCI 2AC3 - Automata and Computability

TECHNICAL SKILLS

Languages: TypeScript, Python, HTML/CSS, JavaScript, SQL, Java, C++, C, C#, Haskell, Ruby

Developer Tools: Git, Docker, Amazon Web Services, Vite, uv, Pip, npm, Figma

Libraries/Frameworks: Next.js, NodeJS, React, Vue, Tailwind, Bootstrap, Flask, NumPy, Pandas, Matplotlib

PROJECTS

CineRate – Movie Recommendation System 🗄 | *Java, Git, CSV, UML*

Dec 2025

- Built a modular recommendation engine processing 1K+ movie records and ratings via structured CSV pipelines.
- Converted ambiguous requirements into formal SRS/SDD defining system scope and success criteria.
- Implemented rating aggregation and similarity logic to produce deterministic, testable recommendations.
- Reduced integration defects by enforcing clear interface contracts across core modules.

Armoire — Social Fashion Web App 🗄 | *PHP, JavaScript, HTML, CSS, SQL*

May 2025

- Developed a full-stack social marketplace enabling users to post fashion content and transact clothing items.
- Built server logic in PHP with dynamic front-end interactions in JavaScript, supporting CRUD and marketplace flows.
- Managed relational data (users, posts, listings), improving usability with responsive UI and client feedback loops.

CSV Search & Analysis Tool 🗄 | *C, Make, Git*

Mar 2025

- Built a CSV query engine in **C** enabling structured search and filtering over tabular datasets.
- Implemented custom data structures and parsers to support efficient record traversal and lookup.
- Produced a formal report analyzing design decisions, correctness, and performance trade-offs.

2048-in-C – Systems-Level Game Implementation 🗄 | *C, Make, Git*

Dec 2024

- Implemented the complete 2048 game loop in pure C, managing grid state, scoring, and merge logic without external libraries.
- Designed deterministic state transitions covering 100% of move edge cases, including multi-merge constraints.
- Strengthened low-level debugging skills through manual memory inspection and control-flow tracing.

EXPERIENCE

Clinical Operations Intern – Systems & Operations

Sep. 2023 – Jan. 2024

Brightshores Health System

Owen Sound, Ontario

- Operated **400+ hours in a high-availability, real-time environment** with zero tolerance for incorrect state.
- Validated and propagated **time-critical data** across **interconnected systems** under latency constraints.
- Performed **hundreds of independent ECG acquisitions**, debugging signal and device failures.
- Executed **protocol-driven workflows**, minimizing synchronization and handoff latency.
- Maintained reliability of **networked, fault-intolerant devices** in live production.

Digital Literacy Program – Technical Lead & Instructor

Aug. 2021 – Jan. 2024

Owen Sound & North Grey Union Public Library

Owen Sound, Ontario

- Led a long-running **technical support and training program**, delivering 200+ hours of instruction.
- Resolved **cross-platform OS and device issues** in 70+ individualized support sessions.
- Supported users across **Windows, macOS, iOS, Android**, and common consumer hardware stacks.
- Applied outcome-based iteration to optimize support format, improving knowledge retention and task completion.
